Joshua Wang

Computer Science at the University of Waterloo
joshua.wang828@gmail.com — (647) 761-0828 — jojothewarrior.com — GitHub — Devpost

Highlights

- Silver Medalist, 7th Place, **2025 Canadian Computing Olympiad (IOI selection test)**
- Waterloo ICPC Team #2, Competing at ECNA in November, 2026
- 4x AIME Qualifier (2021-2024), **3rd** at the **Canadian Team Mathematics Contest**
- Winner at HackMIT, 2026 (Cognition Sponsor, $5K USD prize)
- Finalist at Hack the North 2024 with project ChatGPMe

Education

University of Waterloo, BCS, Computer Science September, 2025–August, 2028
Founder of the Avalon Club (40+ Members); **4.0 GPA**

- Executive of Waterloo Quant Club; creating Algo Comp and Trading Games
- Attending CS860, Grad-level course in algorithms and complexity
- Advanced coursework in Compilers, C++ OOP, Functional Programming

Experience

ML Researcher Intern – Huawei, Markham May 2026–August 2026
Human-Machine Interaction Lab, Sensory Information Team

- Built a feature of Huawei's **smart rings** to control Bluetooth devices through hand gestures
- Trained **TCN** and **LSTM** architectures on datasets of IMU signals with **PyTorch**; **contrastive learning** to model different user archetypes, extending on ideas from prior **ICML and CHI** research
- Achieved a path-reconstruction MSE error **34% below SoTA**, with a 97.6% out-of-sample touch accuracy

Discover Citadel - Citadel, New York City April, 2026
Selective 3-day quant trading insight program for undergrads.

- 1st Place in C++ Engineering Challenge, 3rd Place in Trading Challenge

Algo-Comp Executive - Waterloo Quant Club September, 2026 - Present

- Implementing a low-level C++ algorithmic-trading competition platform, including order-book matching, exchange routing, and custom instruments

Projects

Sports-Arbitrage Engine December, 2025 - Present

- Built a concurrent Python system to collect and compare live odds across five sportsbooks using asynchronous I/O, multithreading, `aiohttp`, and Selenium.
- Automates catching opportunities and data-processing workflows for time-sensitive market data.

Syllavise - Contract SWE May, 2025 - Present
Syllavise (published on the App Store) allows students to upload syllabi and organize their coursework.

- Private $40K CAD contract work in collaboration with my roommates, with 1,000+ subscribed users.
- Database management with `Supabase`, frontend development with `Next.js`

Skills

Languages: C++20, Python, TypeScript
Systems / Tools: Linux, Git, Docker, asynchronous I/O, multithreading, WebSockets
Technical: Algorithms and data structures, quantitative modeling, machine learning, PyTorch
