Education

University of Waterloo **Waterloo, ON**

Bachelor of Computer Science (Honours, Co-operative Program) *Sept. 2025 – Aug. 2028*

- Faculty average 99.33% (CS and Math courses) | Term Distinction and Excellent Standing | President's Scholarship of Distinction, Randall J. Howard Entrance Scholarship
- Founder, Avalon Club (40+ members)

Relevant Coursework: Designing Functional Programs, Algorithm Design and Data Abstraction (Advanced), Foundations of Sequential Programs (CS 241E, Scala), Logic and Computation (Enriched), Object-Oriented Software Development (Enriched, C++), Probability, Combinatorics, Linear Algebra, Calculus, Game Theory

Languages: Java, Python, SQL, TypeScript, JavaScript, C++20, C#, Scala

Libraries/Tools: Next.js, Supabase, PyTorch, pandas, NumPy, Matplotlib, aiohttp, Selenium, Docker, Linux, Git, WebSockets

Experience

Huawei | Python, C++, Jupyter Notebook **Markham, ON**

Machine Learning Researcher Intern, Human-Machine Interaction Lab *May 2026 – Aug. 2026*

- Built an experimental smart-ring feature that controls Bluetooth devices via hand gestures, owning data collection, modeling, and evaluation
- Designed data-collection interfaces that produced a 40-hour participant corpus of IMU signals
- Trained TCN and LSTM models in PyTorch; reached 97.6% out-of-sample touch accuracy and error 34% below state of the art

Waterloo ICPC Team (Waterloo Gold) | C++, Java **Waterloo, ON**

Competitor *Jan. 2026 – Nov. 2026*

- Placed 3rd in the Waterloo Local contest and 6th in Waterloo Team Selection to earn a spot on Waterloo Gold; competing at ECNA in November 2026

Syllavise | Python, Django, TypeScript, Scala **Remote**

Software Engineer, published on the App Store *Sept. 2025 – Jan. 2026*

- Built and managed the Supabase backend (accounts, course data, syllabus-upload workflows) for a production app with 1,000+ subscribed users
- Shipped end-to-end product features in Next.js and TypeScript, from data model to user-facing UI, under a $40K CAD contract

Non-Trivial Research Fellowship | PyTorch, Pandas, LaTeX **Toronto, Ontario**

Independent Researcher *May 2025 – Aug. 2025*

- Replicated Apollo Research's linear-probe method for detecting deception in LLM activations; built GPU pipelines for inference, activation extraction, and probe evaluation (AUROC 0.976 on Qwen3-32B)

Projects

Sports Arbitrage Engine | Python, aiohttp, Selenium **Dec. 2025 – Present**

- Engineered a live odds aggregation system in Python that collects and compares lines across five sportsbooks in real time
- Designed a concurrent pipeline combining asynchronous I/O (aiohttp), multithreading, and Selenium-driven collection to keep time-sensitive data fresh
- Automated arbitrage-opportunity detection and the data-processing workflow behind it, removing manual odds-checking

HackMIT 2026, Winner of Cognition Prize ($5K) | Python, SQL, Matplotlib **Sept. 2026**

- Won the Cognition-sponsored prize at HackMIT 2026 (project: Plume submission)

ChatGPMe, Hack the North 2024 Finalist | Unity, C#, Cohere API **Sept. 2024**

- Built the backend API for a Unity time-management game where players answer AI-style requests; scored each response against a real model's answer using the Cohere API, and added the in-game typing input

Awards

Silver Medalist, 7th place, Canadian Computing Olympiad (2025) ■ Perfect score 75/75, 2025 Senior CCC ■ USACO Platinum

Hobbies & Interests

Competitive programming ■ Avalon Club ■ Poker ■ Card magic ■ Intramural basketball
